

## Biocult Expands Services with new Team and Technology

UDEN, Netherlands, April 1, 2026

Biocult, part of Hycult Biotechnology B.V. has expanded its organization with new scientific expertise, additional technological capacity, and a strengthened development team. With this strategic expansion, Biocult now offers assay development services alongside its established manufacturing services, providing a more complete, integrated service portfolio for its partners.

This expansion enables Biocult to support customers across the full development process, from early assay development and analytical validation to IVDR-compliant workflows and production.

As part of this growth, Biocult has:

- Welcomed five highly experienced specialists to the team,
- Expanded its assay development and analytical validation capabilities,
- Invested in advanced equipment to support more complex development projects,
- Further streamlined the workflow from concept to product.

“With this expansion, we are strengthening our ability to support both researchers and industry partners with high-quality and reliable solutions,” says Ronald de Niet, CEO of Biocult. “By combining assay development expertise with our manufacturing capabilities, we can support customers more effectively throughout the entire product lifecycle.”

These developments reinforce Biocult’s position as a trusted partner in the life sciences, diagnostics, and biotechnology sectors.
